Using the EBSCO Cite feature

On EBSCO interfaces, when you are viewing an article detail, you can see how the citation for that article should be formatted in a variety of popular citation formats, including MLA, APA, etc.

There are many styles and forms used to cite the sources supporting your research. When using the EBSCO citation tool, please make any necessary corrections before using the citations. Data used to cite electronic sources is not yet standardized; therefore, researchers should review citations carefully. Pay special attention to personal names, capitalization, and dates. Double check your library resources for the exact formatting and punctuation guidelines.

To view citation formats for an article:

1. Run a search on EBSCO and view a search result.
2. From the Detailed Record, click the Cite icon.

3. When you have decided which citation format you want for the article, copy and paste the citation directly into the Works Cited or References page of a document created in a word processing program such as Word.
Consult your institution's reference librarian (if available) for more clarification on the citation style and formatting you should use. Students are encouraged to check with their instructors as most academic institutions have standardized requirements.

For more detailed information, see the links below to view citation formatting and examples for the various citation styles listed:

- AMA Style
- APA Style
- Chicago: Author-Date Style
- Chicago: Humanities Style
- Harvard: Author-Date Style
- MLA Style
- Vancouver/ICMJE Style
- How to Cite Images

Whatever style you choose, accuracy, clarity, and consistency are the most important factors when citing information sources.
